THE BRAND-FUNDED DOCUMENTARY SYSTEM · MODULE 2

Positioning: What a Brand Is Actually Buying

A brand does not fund your film because it's good. It funds your film because your film does something *for the brand*. Your job in this module is to figure out exactly what that something is, name it, and prove it, before you ever build a deck or send an email.

This is the module most filmmakers want to skip. Don't. Positioning is where deals are won or lost. A perfectly designed deck aimed at the wrong asset is a wasted deck. Get this right and everything downstream gets easier.

The Four Assets

Brands fund documentaries to acquire one or more of exactly four things. Learn this verbatim. Every pitch you ever make will lead with one or two of them.

1. Audience access

Your film reaches a community the brand can't credibly enter on its own, farmers, climbers, nurses, veterans, foster parents, autism, mental health, clean water, wildlife, children and so on. A brand can buy an ad aimed at these people. It cannot buy their trust. Your film has earned proximity to a community; that proximity is an asset.

The counterintuitive rule: **niche beats big**. 10,000 of the *right* viewers outvalues 10,000,000 random ones. A brand selling rural-line insurance would rather reach 10,000 actual rural nurses than 10 million general viewers, because the 10,000 are all buyers and the 10 million are mostly noise. When you size your audience, resist the urge to inflate it into a giant vague number. A precise niche of active viewers is worth more than a fuzzy mass.

2. Values proof

The film demonstrates what the brand *claims* to stand for; sustainability, craftsmanship, women's safety, rural healthcare, whatever's on their mission page. Here's the distinction that sells: **an ad says it; a doc proves it**. A brand can spend a fortune on a campaign asserting it cares about rural communities. Or it can be associated with a documentary that shows rural communities being served. One is a claim. The other is evidence. Evidence is worth more, and brands know it.

3. Story world access

Settings, subjects, and footage the brand's own content team could never manufacture, expeditions, courtrooms, backstage, frontline, an operating room at 3 a.m. in a town of 900. Content teams have budgets and cameras but no access. You have access. That footage and those worlds are an asset a brand literally cannot buy any other way.

Everyone who makes documentaries for a living knows that having that insider access is the difference between a mediocre film and a show stopper. That exclusivity, or core demographic access is where the value is for brands. You're highlighting an audience they can't reach alone, or they want to reach it through your lens.

4. Activation material

Everything the brand can *do* with the film once it exists: premieres to host, cutdowns for social, employee screenings, panel events, recruiting content. This is the asset that turns a sponsorship from a logo placement into a program. A brand's marketing team must justify spend with activity. Give them activity.

Your job in positioning

Here it is, stated exactly:

Name which 2 of the 4 assets your film delivers, to whom, with evidence.

Two. Not four. Trying to claim all four makes you sound like you don't understand your own film. Pick the two strongest, the ones you can prove, and build the pitch on those. The other two can appear as bonuses, but two lead.

The positioning worksheet

Work these four rows in your Sponsor-Fit Workbook. Be specific and be honest, a brand will fact-check the audience size on the call.

1 Film → audience. List three niches your film genuinely reaches. Size each one *honestly*. Not aspirational. Actual. If you don't know, write your best real estimate and mark it as an estimate. You can utilize ai to analyze the market and deliver realistic numbers.

2 Values themes. List three values your film demonstrably proves. Not values you admire, values your footage actually shows.

3 Story-world assets. List the settings, subjects, and footage that no other content team could manufacture. Be concrete and specific. "Access to a rural ICU during a staffing crisis" beats "healthcare settings."

4 Activation inventory. List what you can genuinely offer: which events, which cutdowns, which screenings, which Q&As. If you can host a premiere, say so. If you can cut six social pieces, say six.

5 Legal Documents. This is more a filmmaker to filmmaker reminder. Whenever you film anyone, you need them to sign waivers and consent forms. This is a non-negotiable and when approaching brands and sponsors, it becomes even more important, without the legal documents in place, a sponsor will not use your footage if it shows people and places you didn't get waivers for, if needed. It puts them in an uncertain liability situation and no brands want to take that on.

When the worksheet is done, read across it and circle the **two assets** that come through strongest with the most evidence. Those are your lead.

The editorial independence rule

Say this out loud and put it where you'll see it during every negotiation:

Sponsors buy association and access, never final cut.

We put this in writing; Module 7 gives you the verbatim clause. But it starts here, in positioning, because it changes how you pitch. You are not offering a brand control over your film. You are offering association with it. Films that sell final cut become ads, and both sides lose: the film loses the trust that made it worth sponsoring, and the brand loses the credibility it was paying for.

This is not just about ethics. It's product design. **Trust is the thing you're selling.** The moment a sponsor could dictate the edit, the film stops being evidence and starts being a commercial, and its value to the brand collapses. Protecting your independence protects your price. Say it proudly, not apologetically.

Filmmaker's note: If you are in negotiations with a potential brand or sponsor and the subject of creative input or worse, final cut, comes up, it might be a test to see how far you'll bend, sure, but most likely it's because they want control over the outcome of your film. As tempting as it might be to filmmakers genuinely stuck in the funding

process, it's a mistake. You can avoid acquiescing by reminding the people across from you, who entered these negotiations, that they did so because of the current 'use' value your film provides them. To change the film now, would be to change the very reason they were attracted to it in the first place. Remind them that you're in negotiations because of the film's impact as it stands. There is a delicacy to storytelling that not every businessperson knows. You change one thing, you can too often change the meaning of the film, the points being made, the film's takeaway. Direct them back to the initial connection.

The example thread continues

Back to **Dana** and her rural-nurses film. (Fictional filmmaker, illustrative only.)

She works the Four Assets:

- **Audience access:** rural nurses and the small-town communities they anchor. She sizes it honestly: her festival, community-screening, and partner-org path plus a realistic streaming estimate puts her 24-month reach in the low-to-mid tens of thousands, mostly the exact people a health system or rural insurer wants. She writes the real number, not a dream number.
- **Values proof:** her film proves "we invest in rural healthcare" better than any campaign could, because it *shows* it. It proves commitment to underserved communities and to the nursing profession.
- **Story world access:** overnight shifts in a clinic two hours from the nearest hospital; a nurse driving a county's worth of home visits; footage no corporate content team will ever get.
- **Activation inventory:** a regional premiere she can name and host; up to six social cutdowns; two employee screenings with a filmmaker Q&A; a panel on rural healthcare staffing.

Reading across, Dana circles her two leads: **audience access** and **values proof**. For a regional health insurer or a hospital system, those two are the whole reason to say yes. Story world and activation ride along as bonuses.

Notice she didn't claim all four with equal force. She picked two, backed by evidence, aimed at a specific buyer. That's positioning.

Common mistakes

- **Claiming all four assets.** It reads as a filmmaker who hasn't thought hard about their film. Lead with two.
- **Inflating the audience.** "Everyone interested in healthcare" is not a niche and a brand will catch the fantasy. Size honestly; a real 30,000 beats a fake 3 million.
- **Confusing values you hold with values your film proves.** The footage must show it. If the film doesn't demonstrate the value, don't sell it. Don't change your film to suit a brand's ideals. They are buying into your vision.
- **Vague story-world claims.** "Behind the scenes" means nothing. Name the specific access. This unique access is often the very thing they can't bring their own cameras into and why they need your film.
- **Treating editorial independence as a weakness to hide.** It's your strongest selling point. The film is trustworthy *because* the sponsor didn't touch the cut.
- **Positioning to no one.** "A brand" is not a buyer. Positioning is always *to whom*. Keep a specific type of buyer in mind for each asset.

Action checklist

- ☐ Completed all four rows of the positioning worksheet: audience (3 niches, honestly sized), values (3), story-world assets, activation inventory.
- ☐ Circled the **two** strongest assets, the ones with the most evidence, as your lead.
- ☐ Named a specific *type* of buyer for whom those two assets are compelling.
- ☐ Wrote the editorial independence rule at the top of your negotiation notes: sponsors buy association and access, never final cut.
- ☐ Confirmed every claim in the worksheet is something you could prove on a call.

When you can name your two lead assets, to whom, with evidence you'd stake a call on, go to Module 3 and build the target list.
